

METHODS AND APPARATUS FOR EVENT HANDLING

ABSTRACT OF THE DISCLOSURE

5 The invention is directed to techniques for receiving an event message,
identifying event information required to process event data based on the event
message, based on the event information, determining if existing event
information is accessible to process the event data and if the existing event
information is not accessible, providing an event rejection indicating missing
10 event information and receiving the missing event information identified in the
event rejection but if the existing event information is not accessible, providing
an event rejection indicating missing event information and receiving the
missing event information identified in the event rejection.
